# The STEINERT MP Range

STEINERT Australia is pleased to offer a new Mains Power electromagnet as part of its magnetic separation product mix. The STEINERT Group has been supplying trustworthy and reliable tramp removal magnets into harsh working environments for many years, however, the challenge has been the necessity to provide a stand-alone power supply to run the magnet - which can survive in extreme climates.

This new range offers a solution to various industry applications - both in Mining and Resource Recovery sectors. They do not need a separate power supply and they have been specifically designed to run directly off the customer's mains power supply.

## FEATURES:

- Reduce overall footprint as there is no area required for a control cabinet
- Reduced costs of installation time and commissioning
- Underground compatible - Zone 21
- Available in all our magnet makes and models including self-cleaning
- Australian made
- **Requires a suitable three phase power source only**

Why have this....

...when all you need is this!
